Case Study Exercise on Supply Chain Management

EY Lecture Series „Supply Chain Planning“
Summer Semester 2023
Technical University of Darmstadt

We hereby certify that

Efe Yemez

successfully completed the SAP Case Study Exercise on Supply Chain Management, as a supplement to the EY lecture series "Supply Chain Planning".

The course provided the students with basic knowledge in the configuration of the SAP ERP and SAP SCM modules as well as the interaction in the context of integrated supply chain planning. The following topics were covered:

- Master data in the ERP and SCM systems and the associated interface management,
- the SCM module Supply Network Planning (SNP) for rough-cut capacity planning and network planning using the planning methods heuristics and optimization, as well as
- the SCM module Production Planning and Detailed Scheduling (PP/DS) for production planning and detailed planning of machine assignment.

In this exercise, the students - based on a fictitious company - were able to expand their knowledge acquired in the lecture series "Supply Chain Planning" with SAP software skills.
